

## Stain Charges

This brochure contains Minwax oil based stains.

The retail stains are designed for the average home owner to apply and have very long dry times. This is not an indication of quality, they are just slower. A retail stain may call for 6 hours with a very easily influenced curing cycle by the weather that will greatly extend that cycle. This slower cure time raises the cost of labor to complete the job.

Please be sure you are using the correct pricing for these stains. The cost is under Minwax Retail Stains on your price page for the cabinetry you are considering.
